## Carnation flower planting information

Eve Lifesavetti image springs are in full swing, and it's time to get serious about planting! For warm areas, heat-like vegetables such as tomatoes and gooes are ready to enter the ground. However, it may need to be put on hold until late January or later in the northern climate, especially if the night is going down to the 40s. For most of the country, annual flowers can now be planted. For less hardy frailty who don't like a bit of frost - patient, for example - wait until after the last expected frost date in your area. Hardy flowers such as sweet alyssum and snapdragons are not a hard freeze, but they will have a cool night. Check your local university co-op extension (find it here) for the last frost date in your area. Generally, here's what you can plant in May: ad-1 spinach continue reading under spinach prefers cool weather and bolts (go to the seeds) when the temperature warms up. It's your last chance to plant this hardy green until autumn, so leave it on the ground to enjoy baby leaves in a matter of weeks. Sprinkle the seeds in a row and lightly cover them with soil. Keep it moist. Varieties to try: Bloomsdale Long, Space Shop now has 2 snapdragons, this pretty operation has a strong upright form and continues to bloom throughout the summer. A little colder and stronger than many other kites, so you can set them up at the beginning of the season in the northern climate. They also make long-lasting cut flowers for vases. Varieties to try: Madame Butterfly Mix, Tutti FruitSHOP NOW 3 Swiss Chard This beautiful plant is a great choice for mixing all the colors of the rainbow with large pale green or bronze leaves and stems and decorations. Cover the seeds directly, lightly with the soil. Prefers cool weather, but is heat resistant and can be winter after winter in temperate climates. Swiss chad also grows well in containers. Try varieties: Brightly lit, the Ford Hook Giant Shop now loves the annual cold weather growing low in 4 Robellai, so enjoy it now before the temperature soars. If it begins to look entangled, the haircut will help it rebound when the weather cools down again in the fall. Varieties you can try: Laguna UV, Laguna White Shop NOW 5 Beans In a warm climate, beans can go to the ground at the beginning of the month. The northern climate does not Si-won Lee in soybeans soil, so you have to wait until the end of the month. Plant seeds because transplantation is usually not successful. Bush beans and pole beans that need to climb wallpaper or nets are prolific plants, and the more you pick, the more they are produced. Varieties to try: Blue Lake 274 (Bush), Seychelles (Pole) SHOP NOW 6 Herbs now is the time to get herbs in a pot or bed. Cilantro actually prefers cool weather, and rosemary, parsley and thyme are still hardy enough to get into the ground in a cold country. Wait for a warm night before planting soft herbs such as basil. Varieties to try: Amazing basil, lemon thyme shop now 7 marigold marigolds tried - and true Why: they flower all season, they are bright and holy, pests do not bother them. Plant them among edible crops to keep bugs and rabbits away (it sometimes works!). Seeds or transplants can all be planted now. Varieties worth trying: Queen Sofia, French vanilla shop NOW 8 Bok Choy Traditional cabbage is a good alternative because it grows straight as it's a lot of space in the garden. This sturdy Chinese cabbage can be planted from early spring to midsummer. Like other vegetables, you can cut baby leaves. Varieties to try: Black Summer, Joey ChoiSHOP now tolerates this delightful annual cold with 9 sweet aliums, so it's good to plant now if the weather is still a little iffy in your area. The sweet scent attracts water sources and is lovely in baskets, containers or border walkways. Try varieties: Snow Princess, Dark Knight Shop now 10 carrots directly sow seeds in the garden after the danger of frost has passed. Transplantation does not work well. Thin plants about 3 inches between plants. Use scissors to trim the tops, because if you pull the model, it can damage others nearby. Varieties to try: Danver, Purple Haze Shop NOW 11 Strawberries This perennial needs fertile soil, so add plenty of compost to your bed. The crown, the central growth bud from which the leaves appear, is placed in the ground so that it is at the soil level. Find the upper limit type, which means producing berries until the first frost. Most types grow well in containers. Try varieties: seascaapes, berry treasures and corn from most of the 12 countries now, plant seeds now. Corn needs a lot of water, so make sure it's not too far from the water source (you don't want to carry the water too far during dry spells!). Can be planted in short row blocks for proper moisture. Varieties to try: American Dream, Honey and Cream Shop 13 Sorrell have you never heard of Gabo Green? Sorrell is pretty, perennial and one of the first greens to appear in the spring, so he's on the way to a comeback! Enjoy a tangy lemon leaf in your spring and early summer salad and return next spring! Varieties to try: Red veins, SorrellSHOP NOW 14 Cucumber cucumbers are sensitive to colds, so wait patiently for all the dangers of frost to pass in the area. Seeds are fine because plants only need 50 to 60 days to mature. Varieties to try: Lemon, Diva Shop NOW 15 Lavender Lavender is perennial, so you'll return every year. Choose from a variety of hardy in the USDA area. Sweet aromas and long-lasting flowers make every garden a little more romantic! Bonus: Save the dried flower head to make the bag. Varieties to try: Grosso, SuperBlueSHOP NOW This content is created and maintained by third parties and imported into this page so that you can provide an email address. You can find more information about content similar to this one at bomb-indentition Elias/Getty Images Bush Moran piano.io. Make a statement in the spring garden, but tree peonies can sport flowers up to 10 inches across woody stems that do not die on the ground again in winter. Tree peonies like the 'Mrs Fry' breed are slow to mature, but the sight of 50 flowering 5ft peonies is worth the wait. Deeply divided foliage adds to the characteristics of this plant. USDA Growing Area: 4-8 Color Varieties: White, Red, Pink, Purple, Yellow Sun Exposure: Full Sun Soil Needs in Partial Shade: Fertile Loam Josie Elias /Getty Images This firey red poppy is moved by the moniker 'Goliath!' Oriental poppies send long tap roots to the soil, and they help set a long life in your spring garden. Flowers exceeding 7 inches in diameter are not unheard of as happy plants. To keep an eye on poppies, the entire sun and excellent drainage are the most important requirements. USDA Growing Area: 3-9 Color Varieties: Orange, Red, Pink, Purple, White, Peach, Maroon, SalmonLine Exposure: Full Suntotoyang Needs: Fertile and Average Moisture Andreas Nauman/Getty Images In the world of hydroponic hybrids, big flowers are getting better and better. This genus of plants has several species commonly used in landscaping, all of which are famous for having large flowers. For example, the Hydranga tree 'Annabelle' has a 12-inch flower head, a wonderful staple in many shade gardens. However, 'Incrediball' has become popular because while it blooms on new trees, its stems will not protrude under the weight of rain-soaked flowers. In addition to the varieties of H. aporescenscens, varieties of H. macrophylla, H. cerata, H. paniculata and H. quercifolia are all known for their impressive flowers. A protected site with shade will help the seedds shine throughout the growing season. USDA cultivated area: 3-9 (depending on species) color varieties: blue, pink, white, red, purple line exposure: the total solar soil needs in partial shade: rich, porous, rich soil; pH is used to describe some species Jackie Parker photos/Getty Images the term dinner plate dahlias are a variety of large and impressive flowers and dahlias. Most commercially available dinner plate dahlias are hybrid varieties. If you've grown dahlias successfully in the past, your journey to grow dinner plate varieties like 'Hamari Gold' will be easier. Like many large flowers, Dahlias are more like everything: more sun, more water, more prey. By removing the side buds, you can direct the plant to produce one giant flower with all its energy. Expect steak plants for support, and flowers to mature in late summer. USDA Growing Area: 8 receiving days 11: Rich and well-drained soils range from 15 to 5: soil needs: white, pink, red, yellow, orange, purple, double color solar exposure: the whole sun (some afternoon shades will help in very warm climates) often grow annually. The plant, known as Westend61/Getty Images water lilies, contains about 70 species within at least five different generas. They are found The world is a tropical species that is most often sold commercially. Most species have fairly large flowers, but those known as giants truly have huge flowers and leaves. For example, the bafly flowers of a Victorian Amazonica try to keep up with the amazing 10-foot leaves that can support a small person's weight. Basketball substitute flowers live only for a few days to carry out their reproductive destiny. You can't grow this plant in a typical water garden, but you can appreciate healthy examples of giant water lilies in botanical gardens like Longwood Gardens in Pennsylvania. USDA Growth Area: 10-11 (V. amazonica) Color Varieties: White to Pink/Purple Sun Exposure: Full Solar Soil Needs: Flooded Rich loam Maria Mosolova/Getty Images A hybrid of trumpets and Oriental lilies, orient lily is constantly growing in popularity as a new breed. Fragrant 10-inch flowers appear late summer on sturdy 5-foot stems. Try the pale yellow variety Big Brother, which is called Big Brother. Like most lilies, orientees are best planted in late autumn or early spring. Watering in acidic or alkaline soils with acidic-reinforcing fertilizers helps them thrive. USDA cultivation area: 4-8 color varieties: white, yellow, pink, apricot, burgundy, red and double color solar exposure: total solar soil needs in partial shade: medium moisture, well drained soil. Slightly acidic soil Maria Mosolova/Getty Images Red Amarellis flowers are popular during the winter break, but these gift plants are available in a number of colors and forms. Larger bulbs produce larger plants and flowers, so show off on premium bulbs from trusted sellers. A 'double record' with red and white stripes produces 8-inch flowers for indoor enjoyment. Commercially sold amarillis bulbs are a hybrid of various hiistram species developed over the years. Amaryllis is best grown in relatively cool rooms (60 to 65 degrees Fahrenheit) under bright, indirect lighting. USDA Growing Area: 8 receiving days 10; In general, because winter cooling period is necessary, even planted annually in warm climates color varieties: red, pink or white sun exposure: partial shade requires full solar soil; Humusy, well-drained potted soil; Garden Sabuskin/Getty Images Sunflowers can set the standard for giant flowers in flower gardens, rich, well-drained soils, but are all created equally when it comes to sunflowers. 'Mammoth' is an gabo variety that reliably produces a 12-inch flower head filled with oil-rich seeds. 'Sunzilla' is a newly grown hybrid to grow a sturdy 16-foot stem that can support giant flowers. Sunflowers are drought-withstanding, but constant pollination and abundant soil will produce the largest flowers. USDA Growing Area: NA; These are true soft color varieties in all climates: yellow (brown and burgundy also available) Sun exposure: Full sun soil needs: nutrient-rich, well-drained soils Up to 9 out of 15 below. David Q. Cabanáo/Getty Images The common potted hibiscus plant is a tropical species that doesn't tolerate even a swirl of frost, but exotic flower lovers may be pleased - the hardy Mallow plant Hibiscus Moshuutos will survive four winters, still boasting a flower diameter of more than 10 inches. Some varieties are equipped with bronze or purple foliage to increase their decorative value, such as the colorful pink flower 'Summer Storm'. In cold areas, especially when the plants are young, protect the roots during the winter with mulch or straw. USDA Growing Area: 4-9 Color Varieties: White, Red, Pink, Blue Sun Exposure: Full Solar Soil Needs: Well-Drained Roam Orienta Koradi/Getty Images Only night owls will be able to admire the nocturnal flowers of the moonflower, which opens at dusk to reveal six-inch white flowers. Soaking or soaking seeds can cause germolysts in a week. Combine fast-growing vines with morning glory and boormerm both hummingbirds and hummingbird moths. USDA growing area: 10 to 12; Generally grown as an annual variety: white, purple line exposure: full suntokle required: If any soil type Claire Plumridge/Getty Images Roses have not been your choice for large flowers in the past, it's time to get used to english roses - a class of roses developed from corsage varieties with the goal of a large, heavy, full flowering goal. With more than 140 petals, this large cupflower is a vase filler with old perfumes. The lemon-colored 'Charles Darwin' and the 200-flower leaf count 'Spirit of Freedom' are repetitive petals that radiate six inches of flowers this season. Roses are prone to fungal diseases in wet conditions, so do not water the foliage when circulating in the air and irrigate. USDA Cultivated Area: 4 to 11 (depending on variety) Color varieties: White, yellow, red, pink, orange, double color sun exposure: Full suntokle needs: Well-drained loam Martin Sifman/Getty Images Protea plants lend an exotic flair to tropical flower arrangements, and The King Protea cynaroides plant produces the largest flower heads of all. Also known as sugar bushes, these South African natives are evergreen shrubs in Area 9 of the USDA, which can grow outdoors and are warmer. Artichoke-like flowers can grow across the feet. Every week for the first two years will have deep water on the plants; After that, they are relatively low maintenance plants. USDA growing area: 9 to 12Color varieties: red, pink, creamy white line exposure: full suntones required: average rock very well drained soil; Prefer acidic soils and continue to 15 down to 13. Elita Leopardani/Getty Images Jacoxcombe Seloscia Argentea var's other world-class coral shapes are the heart of the garden, but add velvety texture and footlong size, with regulars in the cut flower garden. Cockcomb plants are easy. Growing from seeds (they are easy seeds), they withstand humidity as well as dry soil. USDA Growing Area: 2 receiving days 11; Generally annually cultivated color varieties: orange, red, purple, yellow, pink sun exposure: whole suntopodji required: rich, moist and well drained soil; Dry Soil Yael Gasnier/Getty Images Verdlya Davidi's single flower panic can be up to 18 inches long, with each panic consisting of hundreds of dense flowers. Honey-rich flowers will attract an endless parade of butterflies during the blooming cycle, which typically stretches up to four months. pay attention to the possibility of rampant spread; This plant is known to invade in some areas. USDA growing area: 5-9 color varieties: purple; Pink, yellow and red varieties are also availableline exposure: full suntog needs: Southern Gardener Average, well-drained soil Linda Burgess/Getty Images, there is no such thing as the charm of camellia bushes in late winter gardens. For the largest flowers, plant varieties of camellia japonica species. Dissonance helps achieve 6-inch flowers in varieties such as pale pink 'debut'. USDA Cultivation Area: 7-9 Color Varieties: White, Pink, Red, Yellow, Lavender Sun Exposure: Partial Shade Soil Required: Moist, Acidic, Well Drained Soil Soil
